

Configuration steps and output snapshots

Front-end

Configuration steps#

This project was generated with [Angular CLI](<https://github.com/angular/angular-cli>) version 11.2.12.

Development server

Run `ng serve` for a dev server. Navigate to `http://localhost:4200/`. The app will automatically reload if you change any of the source files.

Code scaffolding

Run `ng generate component component-name` to generate a new component. You can also use `ng generate directive|pipe|service|class|guard|interface|enum|module`.

Build

Run `ng build` to build the project. The build artifacts will be stored in the `dist/` directory. Use the `--prod` flag for a production build.

Running unit tests

Run `ng test` to execute the unit tests via [Karma](<https://karma-runner.github.io>).

Running end-to-end tests

Run `ng e2e` to execute the end-to-end tests via [Protractor](<http://www.protractortest.org/>).

Further help

To get more help on the Angular CLI use `ng help` or go check out the [Angular CLI Overview and Command Reference](<https://angular.io/cli>) page.

Back-end

Connect to your mysql server

```
(base) └─(kalikali㉿kali)-[~]
└$ sudo service mysql start

(base) └─(kalikali㉿kali)-[~]
└$ sudo mysql
